

Metamodel Facets

Table of Contents

Metamodel facet modules extend the semantics of the Apache Isis metamodel, for example allowing new naming conventions to be recognised or additional semantics inferred. This is typically done by installing [additional facet factory\(s\)](#)

Module	Description
Paraname8	Infers the name of action parameters from the parameter name itself; that is, there is no need to annotate the parameter. [NOTE] ==== This facet requires JDK 1.8. ====
