Extensions

Table of Contents

Extension modules sit "outside" the Apache Isis framework, extending the functionality of the overall webapp.

Module	Description	Implements (SPI)	Requires (API)	3rd party dependencies
FlywayDB	Uses *FlywayDB* to automatically apply any database migration scripts prior to the bootstrapping of the rest of the Apache Isis runtime.	Persistence Manager Factory (DataNucleus).	(none)	FlywayDB
Quartz	Provides a wrapper around the *Quartz* scheduler.	none; configured in `web.xml`	(none)	Quartz
Togglz	Integrates with *Togglz* to provide a feature toggle capability.	none; configured in `web.xml`	Requires an implementation of `FeatureStateRepository`. The platformapp provides an implementation using the settings subdomain.	Togglz
